SUMMARY

Systems and Automation Engineer with 4+ years of experience designing API middleware, declarative infrastructure (IaC), and automated provisioning workflows. Passionate about eliminating operational toil through Python microservices, full-stack internal tooling, and GitOps-driven containerization.

TECHNICAL SKILLS

- **Software Engineering:** Python (FastAPI, Django, Pytest), Go (Working Knowledge), REST APIs, Webhook Security (HMAC), Asynchronous Workers.
- **Cloud & Infrastructure:** Linux, Google Cloud Platform (GCF, Secret Manager), Rootless Podman, systemd, Traefik.
- **Automation & IaC:** Ansible, GitOps (Gitea/GitHub Actions), CI/CD Pipelines, Bash, PowerShell.
- **Observability & Ops:** Structured JSON Logging, Restic/Rclone Backups, Identity Access Management (IAM).

PROFESSIONAL EXPERIENCE

Technology Consultant | BG Origin Group | Hanford, CA
July 2026 – Present

- **Direct on-site infrastructure support and serve as the primary escalation point across 100+ enterprise environments**, managing M365 tenant configurations, Active Directory user lifecycles, and core network availability.
- **Analyze support signals to identify recurring friction points**, proactively engineering automated solutions to prevent disruptions before they escalate and ensure seamless business continuity.
- **Author Python and PowerShell utility scripts** to automate offline mailbox and email archive migrations, ensuring zero data loss during tenant cutovers and eliminating repetitive manual transfer steps.

IT Operations & Automation Specialist | Turf Distributors | Temecula, CA
June 2022 – October 2025

- **Spearheaded the zero-to-one build of the internal IT helpdesk** following an MSP offboarding, establishing enterprise SLAs, incident escalation runbooks, and cross-functional support standards.
- **Engineered a suite of Python-based SMS automation tools**, including a dispatch logic engine that reduced multi-hour manual tasks to under 30 minutes, and an inbound routing gateway that triaged customer communications with conditional auto-responders.
- **Developed an automated media ingestion pipeline** integrating rclone to simultaneously route raw high-resolution RED camera footage to a local NAS and cloud-based Dropbox archives, eliminating manual data handling.

- **Engineered automated Microsoft 365 user provisioning scripts via PowerShell**, integrating with Active Directory and Salesforce IAM policies to eliminate manual data entry errors.

Technical Support Trainer & Enablement Lead | Skytech Gaming | Ontario, CA
July 2020 – June 2022

- **Engineered a full-stack Django web application** integrated with the Salesforce API to automate customer shipping notifications, parsing tracking numbers to identify carriers and generating targeted messaging queues.
- **Designed a historical audit logging interface** within the Django ORM to track message delivery statuses, eliminating duplicate customer communications and enabling order traceability.
- **Streamlined the IT onboarding lifecycle** by automating the provisioning of VPN access and virtual machine (VM) environments for new hires.

TECHNICAL PROJECTS

Cloud Native Messaging Bridge (Chiron Relay) | *Python, FastAPI, Twilio API, Google Cloud*

- Built serverless, asynchronous messaging middleware using Python and FastAPI to bridge Twilio SMS webhooks and the Gmail API.
- Secured inbound webhook ingestion by implementing Twilio's HMAC-SHA1 signature validation and managed credentials using Google Secret Manager with Domain-Wide Delegation.
- Improved API responsiveness using FastAPI BackgroundTasks for non-blocking execution and wrote a comprehensive Pytest suite for testing in the CI/CD pipeline.

Declarative GitOps Infrastructure (Johto Infra) | *Ansible, Podman, systemd, Traefik*

- Set up a declarative Infrastructure as Code (IaC) environment with Ansible to automate the provisioning and configuration of a hybrid cloud network.
- Deployed core network services using Rootless Podman Quadlets integrated with systemd for automated, secure container management.
- Configured zero-downtime routing using Traefik reverse proxy and built daily disaster recovery pipelines with Restic and Rclone.
